

## 3-Terminal 1.5A Positive Adjustable Regulator

The LM317 are monolithic integrated circuit in TO-252 package intended for use as positive adjustable voltage regulators. They are designed to supply more than 1.5A of load current with an output voltage adjustable over a 1.2 to 37V range.

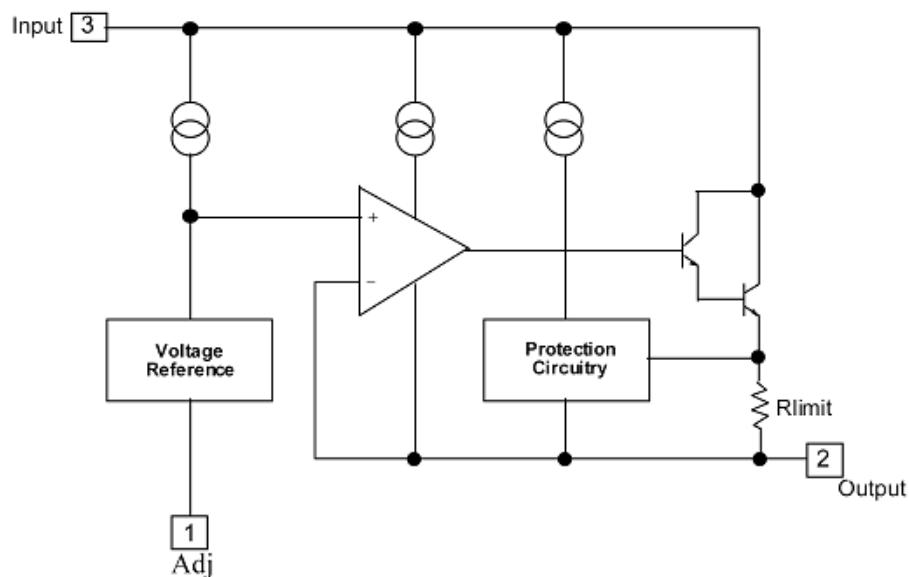

The nominal output voltage is selected by means of only a resistive divider, making the device exceptionally easy to use and eliminating the stocking of many fixed regulators

### Features

- Output Voltage Range : 1.2V to 37V
- Output Current in excess of 1.5A
- Internal Thermal Overload Protection
- Internal Short Circuit Current Limiting
- Output Transistor Safe Operating Area Compensation

### Absolute Maximum Ratings

Parameter	Symbol	Value	Unit
Input-output Differential Voltage	$V_i - V_o$	40	V
Power Dissipation	$P_D$	Internally Limited	W
Operating Junction Temperature	$T_j$	0 ~ +125	°C
Storage Temperature	$T_{STG}$	-60 ~ +150	°C

**Note 1:** Absolute Maximum Ratings: are those values beyond which the safety of the device cannot be guaranteed. The device should not be operated at these limits. The parametric values defined in the Electrical Characteristics tables are not guaranteed at the absolute maximum ratings. The "Recommended Operating Conditions" table will define the conditions for actual device operation.

**Typical Application****Programmable voltage regulator**

$$V_{OUT} = 1.25 \times (1 + R2/R1) + I_{Adj} \times R2$$

$C_i$  is required when regulator is located an appreciable distance from power supply.  
 $C_o$  is needed to improve transient response.

**Regulator with On-off control****Soft Start Application****Constant Current Application**

$$I_{O(MAX)} = \left( \frac{V_{REF}}{R1} \right) + I_{ADJ} = \frac{1.25V}{R1}$$

$$I_{O(MIN)} = \left( \frac{V_{REF}}{R1+R2} \right) + I_{ADJ} = \frac{1.25V}{R1+R2}$$

5mA <  $I_{OUT}$  < 100mA
